## CHUTES :

Soft exhausting tunnel fixed under the mold, allowing to guide and to exhaust the injecting parts out of the mold, protecting them against any contamination providing from the injection moulding machine.

The soft design with a material resisting up to 80° and the fixing devices enable an easy adaptation and using.

## PROTECTING CURTAINS :

Enable to centralize the drop of the parts under the mold. They avoid any contamination or last of production, that can occur in the area of exhaust. The memory of the material used and the small size, make this product useful with all kind of mold (But at a maximum of 60°C).

Option : fixation by magnets.
